## Bauhaus Summer School "Model Validation and Simulation"

Dear project partner,

today I am very glad to inform you that our application

Bauhaus Summer School "Model Validation and Simulation"

in the *ERASMUS Lifelong Learning Programme - Intensive Programmes (IP)* was successful. The German Academic Exchange Service (DAAD) will support our summer course next year. For the then following 2 years we have very good chances by an extension application each year.

As a short reminder, in spring of this year we asked you to fill in an application form to participate in our project proposal for some funds for our annual Bauhaus Summer School. These funds include travel costs and accommodation expenses for 3 students (for the whole time of the course) and one lecturer (for 8 days) from each involved partner institution.

In annexure 1, I summarize the main aspects of the contract between DAAD and Bauhaus-Universität Weimar (BUW) to inform you about all the details (because the contract is in German).

Further, I ask you to sign the attached proposed agreement between your institution and the BUW to confirm your participation/ contribution to fulfill the requirements for the funds of our Intensive Programme (annexure 2).

The next Bauhaus Summer School "Model Validation and Simulation" will be taking place from **07.08.2011 till 20.08.2011** in Weimar. We have to start now to promote this course to our students and keep in mind this date for your personal contribution/ participation here in Weimar. As a first impression, please have a look at our webpage from the last course ([www.uni-weimar.de/summerschool](http://www.uni-weimar.de/summerschool)). All the details for the next course will be discussed in the next months together with your BUW partner. I will also inform them, to begin discussions with you about your contribution.

Please feel free to submit ideas, favorite topics about content and projects, which should be organized next year or in one of the following years.

If there are any questions related to the course or organization, don't hesitate to contact me directly.

Thanks in advance

Lars Abrahamczyk  
Project coordinator
